April 1, 2010

The Honorable John Kerry
218 Russell Senate Office Building
Washington, DC 20510

The Honorable Lindsey Graham
290 Russell Senate Office Building
Washington, DC 20510

The Honorable Joseph Lieberman
706 Hart Senate Office Building
Washington, DC 20510

Dear Senators Kerry, Graham and Lieberman:

On behalf of the organizations signed below, we write to urge you to develop a proposal for climate and energy legislation that retains the long-standing principle of dedicating revenues derived from transportation motor fuels to improving the nation's highway and public transportation systems. To that end, we hope to work with you to develop a strategy that promotes energy independence, reduces greenhouse gas emissions, and improves the condition of critical transportation infrastructure.

Federal motor fuel user fees have supported the Federal Highway Trust Fund since 1956 and the Mass Transit Account of the Trust Fund since 1982. These user fees are the lifeblood of our highways and transit systems which move millions of people and tons of cargo every day. Previous increases in the federal motor fuels tax rate in 1990 and 1993 dedicated some revenue to temporary, short-term deficit reduction, an important goal that remains relevant today, but every other increase has supported long-term investment in our transportation infrastructure. Since 1997 all motor fuel revenues have been deposited in the Trust Fund.

Our surface transportation system faces monumental challenges. The needs of our roads and transit systems far exceed current investment levels. The U.S. Department of Transportation estimates that more than \$30 billion per year of new investment is needed simply to maintain our highways, bridges, and transit systems in their current state of repair and \$75 billion of new investment is needed annually to improve conditions and performance. Unfortunately, the current authorizing law for highway and transit programs expired last year and has been repeatedly extended on a short-term basis. This prevents states and transit agencies from advancing much-needed transportation projects that require predictable, multi-year funding. Further, the Highway Trust Fund has required several transfers of funds over the past three years and a restoration of interest payments to remain temporarily solvent, but it still cannot sustain the current rate of outlays. Any proposal to divert user fees from motor fuels while our roads, bridges, and transit systems are neglected is not sound policy.

The solution to the transportation crisis is the quick passage of a new multi-year authorization bill that accelerates job creation with significant new investment and institutes a more performance-oriented federal transportation program. Enacting a new transportation bill quickly will be very difficult, if not impossible, should Congress approve legislation that diverts revenue from carbon-based fees from motor fuels away from the transportation investment.

Failure to enact a transportation bill will not only harm our economic competitiveness, it will impair the ability of states, counties, cities and transit systems to reduce our dependence on foreign oil and reduce transportation-related emissions. Without a new authorization bill, expanding access to transportation choices like public transportation that reduce emissions and modernizing our highways and infrastructure simply cannot occur. The transportation sector accounts for 70 percent of domestic oil consumption and one-third of carbon pollution.

New fees placed on transportation fuels should be dedicated to the Highway Trust Fund and invested along with other surface transportation funds under a multi-year highway and transit authorization bill. Increasing the availability of funds for transportation would help address transportation infrastructure investment needs and expand access to public transportation and other fuel-saving transportation improvements. We hope to work with you to develop climate and energy legislation that benefits the environment, as well as our economy, our workers and the surface transportation infrastructure on which we all rely.

Sincerely,
